

China Battery Industry Report, 2007-2008

- During the twenty years from 1988 to 2007, China's battery industry has developed rapidly. China's battery output was only 5.984 billion in 1988, and the battery export volume and export value was 947 million and US \$38 million respectively. In the year of 2007, China's battery output reached 33.4 billion, and battery export volume and export value increased to 25.168 billion and US \$8.046 billion respectively.

- During 2002-2008, storage battery output in China gained a rapid growth; the new energy batteries like li-ion battery, NiMH battery and solar battery are all realized the mass production. In addition, the research on fuel battery and super capacitor has also achieved an outstanding progress. The battery sales in china amounted to CNY164 billion in 2007.
