

China Water Supply Market Report, 2008

- China has inadequate water resource; its water occupancy per capita is 22 million m³ only, which is 1/4 of the world's average level, however, the water consumption in china keeps increasing, the total water supply in china increased to 54.05 billion m³ in 2006 from 47.53 billion m³ in 2003 , up by 13.74%. But the figure has dropped in 2007, yet as the urbanization degree in China is comparable low, there's still a considerable development potential for the water supply market. Besides, as water resource is becoming scarce, and the water consumption is constantly increasing, water supply companies will have favorable conditions for further developments.
