

## China Transportation Infrastructure Construction Report, 2008

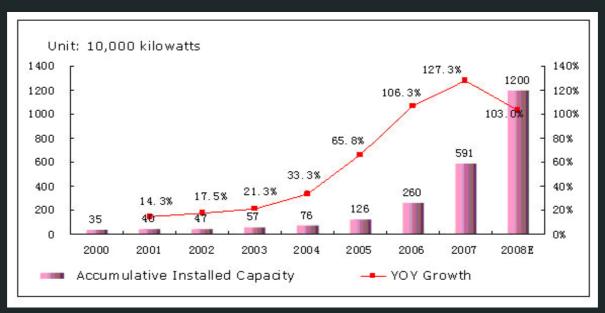

- The transportation infrastructure construction in China has made a great progress in the past years. By the end of 2007, the total road mileage in China was 3.5837 million kilometers with the density of 37.33 kilometers per 100 sq.km; among which, the total highway mileage was 53900 kilometers, the total grade road mileage was 2.54 million kilometers and the total rural road mileage was 3.1344 million kilometers.
- The total railway mileage had reached 78,000 kilometers by the end of 2007 from 517,000 kilometers in 1978, ranked at the third in the world. However, the CAGR was rather low as only 1.43%.

- By the end of 2007, 22 urban railway transit lines had been put into operation in ten cities of China, including Beijing, Shanghai, Guangzhou and Shenzhen etc. The total mileage exceeded 650 kilometers.
- The total inland waterway mileage was 123,495 kilometers by the end of 2007, of which, the total grade waterway mileage was 61,197 kilometers. Moreover, the total number of port berth was 35,947, among which, 1,337 berths have the handling capacity over 10,000 tons.
