

# China Wind Power Industry Report, 2008

- By the year end of 2007, global accumulative installed capacity had reached 94GW, up by 26.76% compared to 2006. According to GWEC, global new installed capacity in 2007 was mainly distributed in seventy countries/regions, and the top five were USA, Spain, China, India and Germany.

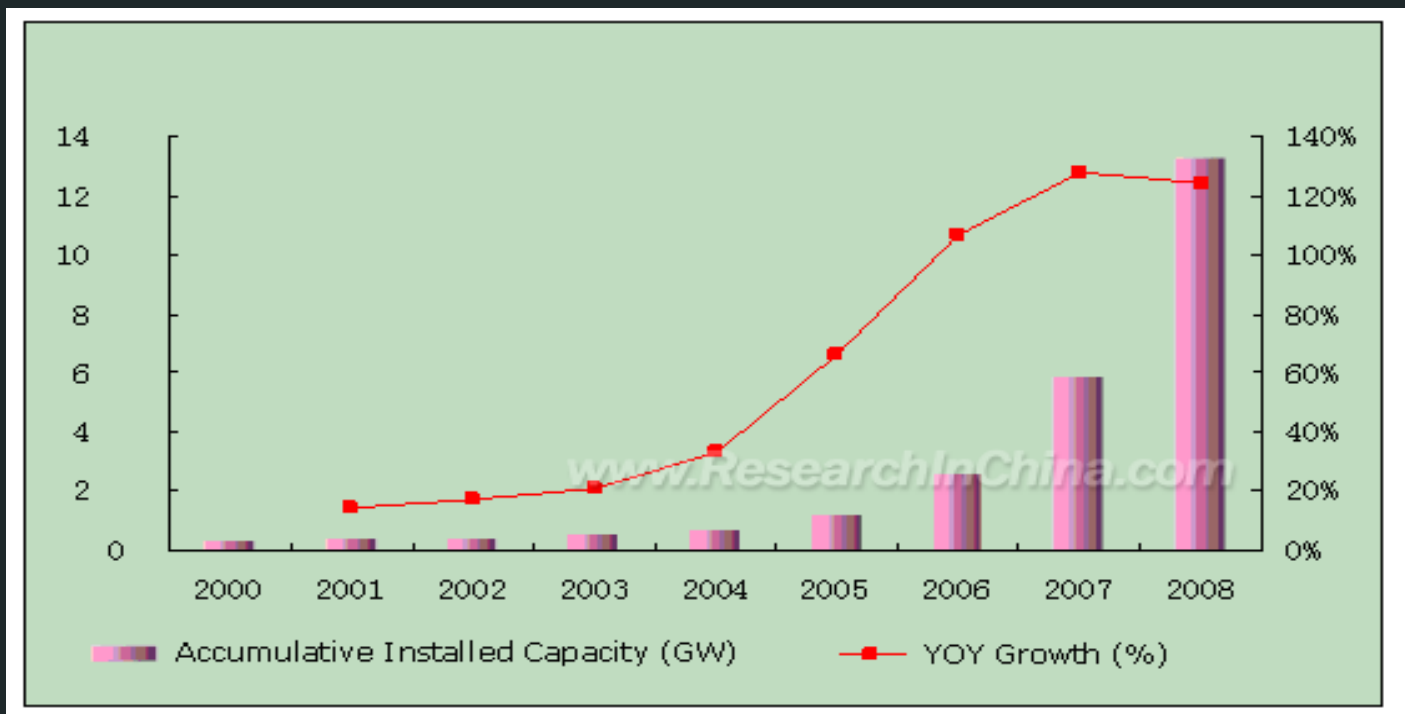

### Global Accumulative Installed Capacity, 1996-2007

Source: GWEC

Starting from the year of 2005, along with the constant release of supporting policies such as Renewable Energy Law, wind power has achieved a significant growth in China, and 3,155 turbines were newly installed with a capacity totaled at 3.3 GW during the year of 2007, ranking at the third worldwide. In 2008, China had a new installed capacity totaled at 7.19 GW; the accumulative installed capacity reached as many as 13.2 GW.
