Global and China Automotive Lighting System Research Report, 2023-2024

Mar. 2024

Installations of intelligent headlights and interior lighting systems made steady growth

Installations and Penetration Rate of Ambient Light in Passenger Cars, 2019-2025E

From 2019 to 2023, the installations of intelligent headlights and interior lighting systems grew steadily. Interior lighting mainly includes ambient, reading, trunk, door, and cluster lights. Among them, the ambient light boasted a penetration of 44.1% in 2023, and sustained an AAGR of 16.3% in recent five years. ResearchInChina predicts that the ambient light as a standard configuration will be installed in 13 million vehicles in 2025, with a penetration rate of nearly 60%.

TOP10 Brands by Touch Reading Light Installations, 2023

The installations of touch reading light soared from 2019 to 2023, with penetration up to 16.8% in 2023, and the most models equipped with this function were from BYD, Audi, and Li Auto.

TOP10 Brands by Touch Reading Light Installations, 2023

Rank	Brand	Installations (10,000 vehicles)
1	BYD	73.7
2	Audi	44.9
3	Li Auto	37.7
4	Volkswagen	27.4
5	Honda	25.3
6	Aion	16.4
7	NIO	15.1
8	Denza	11.2
9	Haval	9.3
10	AITO	9.2

Installations and Penetration Rate of ADB Headlights, 2019-2023

Intelligent headlights are led by DLP headlights, digital headlights, programmable headlights, and adaptive driving beam (ADB) headlights. They can enable such functions as autonomous driving assistance, exterior interaction, and entertainment projection.

In 2023, the mainstream light source of intelligent headlights was LED combination, sweeping about 84% of the installations; halogen headlights made up 15%; laser headlights still took a less than 0.5% share. In 2023, among intelligent headlights, matrix headlights were installed most, and mounted on 2,229,000 vehicles; geometric multi-beam headlights followed, with installation in 231,000 vehicles.

In recent five years, the installations of ADB headlights were on the rise: in 2021, the installations of the standard ADB headlights exceeded the optional for the first time; in 2023, ADB headlights were installed in 1,584,000 vehicles.

Installations and Penetration Rate of ADB Headlights, 2019-2023

Intelligent headlights bear interaction, entertainment and intelligent driving assistance functions

In late 19th century, the first electric headlamp was available on market, mainly for night lighting.

In 2023, headlights became more diversified. As technology evolves, they begin to carry functions other than lighting, including: intelligent driving assistance, interaction, and entertainment.

Applied Technologies for Lighting Interaction / Entertainment / Intelligent Driving Assistance Function

Function	Typical Technologies	Typical Models
Intelligent driving assistance	ADB headlights, matrix headlights, DLP, MicroLED	AITO M9, Jiyue 01, etc.
Interaction	Programmable headlights, DLP, MicroLED	ZEEKR 007/001, EXEED STERRA ES, Avatr 12, BMW iX1, Rising R7, etc.
Entertainment	Programmable headlights, pixel headlights, DLP, MicroLED	AITO M9, etc.

The diversification of automotive lighting functions has not only expedited the application of lighting technologies, but also fueled the integration of automotive lighting with other auto parts

The diversification of automotive lighting functions has not only expedited the application of lighting technologies like DLP, MicroLED, and pixel headlights, but also fueled the integration of automotive lighting with other auto parts, for example, "lighting-screen integration" (using displays for exterior lighting and display), "lighting-surface integration" (integrating smart surface technology into the lighting system, mainly exterior grille lights and interior ambient/door lights), and "perception lighting" (integrating sensors into lights to enhance intelligence).

In the case of interaction function of intelligent lighting, the images projected by headlights and the pixel graphics showed by the LED display convey the user's intents for interaction with pedestrians and vehicles. This technology is mainly enabled by the projection of pixel headlights and the light information interaction mode of programmable headlights.

Xpeng was the first to introduce the light information interaction function, and used it in P7 in 2020, a model with sales of about 5,000 units. This function was available to P5 and G9 in 2022, and smart#1, Avatr 11, SAIC Rising/IM series, and Hongqi H9 began to follow suit in the year. In 2023, the models equipped with lighting information interaction function began to boom, with 330,000 vehicles installed with it, the penetration rate up to 1.6%.

ZEEKR 007 packs Valeo ZEEKR STARGATE, an integrated intelligent light curtain in the front face. The front light curtain supports the light information interaction design, adopts the "light-screen integration" approach, and allows customization of intelligent expressions and courtesy signs. ZEEKR STARGATE is independently controlled by 75 automotive-grade driver ICs provided by TI.

In December 2023, AITO M9 was officially released with Huawei's XPixel automotive lighting technology. DLP projection enables intelligent driving assistance functions such as lane change and turning alert, lane guidance, and light blanket projection. In terms of interaction function, AITO M9's ISD lights with more than 1,000 pixels have built in over 10 animation effects such as welcome, charging animation and light information interaction, as well as over 40 customized patterns. The 4M high-speed serial communication realizes smoother animation effects, and the customized animations can be refreshed via OTA updates to meet the customization requirements of different target groups.

Intelligent automotive lighting is integrated with sensors

As autonomous driving technology advances, automotive lighting systems are no longer limited to lighting functions, but further integrated with radar, camera and other ADAS sensors. They utilize intelligent perception function and common EEA to further enhance lighting intelligence, and keep evolving towards perception lighting.

Design Logic of Automatic Lighting

Status Quo of Lighting System Design	Next design logic for lighting system
Enhanced driver's visual perception	<ul style="list-style-type: none">• Enhance driver's visual perception: higher brightness, longer distance, more humanized design;• Enhance visual perception of robot cars: provide a more suitable perception environment for cameras, LiDAR and other perception hardware. In the future, the perception system and lighting system may be jointly designed to improve the safety and perception efficiency of intelligent driving.

Source: ResearchInChina

In the case of Jiyue 01, a model launched in October 2023, its lighting system and full intelligent driving domain adopt the same visual system. The intelligent interactive lighting system is applicable to lighting interaction designs for different scenarios such as autonomous driving, voice interaction and safety protection. Headlights and high/low beam can be switched automatically through the visual system.

For example, the perception system recognizes the environment before and after entering the lane, and then automatically turns the lights on or off through the autonomous driving execution system. The next step is to automate the lever and directly use vision to determine which lane to enter, and then determine whether to turn left or right. In the future, users will not need to pay attention to the left or right turn when driving.

ZKW and REHAU Automotive decided to jointly drive forward the integration of modern lighting systems in vehicle fronts

ZKW & REHAU Seamless Intelligent Vehicle Front Adopts "Lighting-screen Integration" Mode

ZKW has been researching the integration of sensors and lighting systems since 2019, and has launched products that integrate radar sensors and lighting systems, for example, the "Project Dragonfly".

In May 2023, ZKW and REHAU Automotive decided to jointly drive forward the integration of modern lighting systems in vehicle fronts. They will promote the "seamless intelligent vehicle front" project where light, sensor technology and electronics in the vehicle front are connected. The seamless vehicle front is enriched with light, logo, sensor and heating elements and thus becomes an intelligent design object.

1 Overview of Automotive Lighting

1.1 Automotive Lighting Classification and Technology Route

- 1.1.1 Classification and Functions of Automotive Lighting System
- 1.1.2 Development History
- 1.1.3 Light Source Evolution Route
- 1.1.4 Mainstream Automotive Lighting Technology Route
- 1.1.5 Comparison between Intelligent Automotive Lighting Technologies

1.2 Exterior Lighting System

- 1.2.1 Composition of Headlight
- 1.2.2 LED Lighting: Application
- 1.2.2 LED Lighting: Classification
- 1.2.2 LED Lighting: Cost Structure
- 1.2.2 LED Lighting: Industry Chain
- 1.2.3 Intelligent Automotive Lighting Technologies
- 1.2.4 AFS Headlights
- 1.2.5 Matrix Headlight: Principle
- 1.2.5 Matrix Headlight: Cases
- 1.2.6 ADB Headlight: Principle and Functions
- 1.2.6 ADB Headlight: Development History
- 1.2.7 Pixel Headlight
- 1.2.8 Digital Headlight
- 1.2.9 DLP Technology: Definition
- 1.2.9 DLP Technology: Development History
- 1.2.9 DLP Technology: Principles
- 1.2.9 DLP Technology: DMD Chip Structure
- 1.2.9 DLP Technology: DMD Chip Characteristics and Limitations
- 1.2.10 DLP Automotive Lighting Solutions

1.2.11 DLP Automotive Lighting Suppliers and Solutions

- 1.2.12 OEM Solutions for DLP Automotive Lighting
- 1.2.13 Optimize ADB by DLP
- 1.2.14 New Solution for DMD Chip
- 1.2.15 Micro LED Direct Light Source Projection Technology
- 1.2.16 Micro LED Case
- 1.2.17 List of Micro LED Automotive Light Source Module Suppliers and Solutions
- 1.2.18 Micro LED Automotive Light Tier1 Suppliers and Solutions
- 1.2.19 Micro-LED Latest Dynamics
- 1.2.20 Driver Chips

1.3 Interior Lighting System

- 1.3.1 Classification of In-vehicle Ambient Lighting - By Light Emitting Forms
- 1.3.2 Main Functions and Principles of In-vehicle Ambient Lighting
- 1.3.3 Ambient Lighting Technology Route
- 1.3.4 Application History of In-vehicle Ambient Lighting
- 1.3.5 Development Cycle of In-vehicle Ambient Lighting
- 1.3.6 Industry Chain of In-vehicle Ambient Lighting
- 1.3.7 In-vehicle Ambient Lighting Solutions

1.4 Regulations and Policies for Automotive Lighting Industry

- 1.4.1 Global Automotive Lighting Standard System
- 1.4.2 China's Automotive Lighting Standard System
- 1.4.3 Automotive Lighting Regulations in China
- 1.4.4 China's Automotive Lighting Design Requirements
- 1.4.5 Automotive Lighting Regulations in United States
- 1.4.6 Automotive Lighting Standards in United States
- 1.4.7 Automotive Lighting Standards in Japan and Australia
- 1.4.8 Automotive Lighting Regulations in European Union

Table of Content (2)

- 1.4.9 Projection Regulations

2 Global and China Automotive Lighting Markets

- 2.1 China Automotive Lighting Market Data
 - 2.1.1 Installation of Different Types of Low/High Beam
 - 2.1.2 Installation and Growth Rate of LED/Laser High Beam
 - 2.1.3 Installation and Penetration Rate of Automatic Induction Light
 - 2.1.4 Installation and Penetration Rate of Adaptive High/ Low Beam
 - 2.1.5 Installation and Penetration Rate of AFS Light
 - 2.1.6 Installation and Penetration Rate of ADB Headlight
 - 2.1.7 Installation and Penetration Rate of AHS
 - 2.1.8 Installation and Penetration Rate of Matrix/Geometric Multi-Beam Headlight
 - 2.1.9 Installation and Penetration Rate of Pixel/Laser Headlight
 - 2.1.10 Installation and Penetration Rate of Light Signal Function
 - 2.1.11 Installation and Penetration Rate of Headlight Raising Function
 - 2.1.12 Installation and Penetration Rate of Headlight Cleaning Function
 - 2.1.13 Installation and Major Models of Headlight Delay Off Function
 - 2.1.13 Penetration Rate of Headlight Delay Off Function
 - 2.1.14 Installation and Penetration Rate of Turn Assist Light
 - 2.1.15 Installation and Penetration Rate of Daytime Driving Light
 - 2.1.16 Installation and Penetration Rate of Fog Light
 - 2.1.17 Installation and Penetration Rate of Rain & Fog Mode
 - 2.1.18 Market Size and Penetration Rate of Ambient Lighting Market
 - 2.1.19 Installation and Penetration Rate of Touch Reading Light
 - 2.1.20 Characteristics of China's Automotive Lighting Industry
 - 2.1.21 China's Automotive Lighting Aftermarket

- 2.2 Global Data
 - 2.2.1 Cost Comparison between Automotive Lighting with Different Light Sources
 - 2.2.2 Global Automotive Lighting Market Size
 - 2.2.3 Global Automotive Exterior Lighting Market Size

3 Major Global Automotive Lighting Suppliers

Automotive Lighting Industry Chain
Intelligent Technology Solutions and Supply Relationships of Major Automotive Lighting Suppliers
